

**Consultant, Designer, Executor, Supplier and
Manufacturer of Equipment of Earthing,
Lightning & Surge Protection Systems**

Founder's Insights

Today, the growth and development of the electricity industry as a basic industry has led to the rapid advancement of technology and the growth of other industries and the development of industrialized countries. In this way, planning is one of the most important factors for successful synchronization with the speed of forward changes. Up-to-date technical knowledge, follow-up and knowledge of the process of changing the needs of the consumer market and consequently development and timely investment, staff training, and active presence in specialized events and gatherings are other factors affecting success in this path.

We are thinking of becoming the best in our field. If we accept something, we must finish it in the best possible way. A sense of superiority and leadership is the current and dominant spirit of our culture, and we believe that this excellence and excellence should be evident in all of the company's affairs, from products to processes to manpower. We consider climbing the highest peaks and achieving the most difficult goals within our capabilities. We do not set boundaries for progress and excellence.

AZANIR's Activities

Activities

Consulting, Design, Implementation, Supply and Production Of Earthing System Equipment,
Lightning & Surge Protection

Activities

Consulting, Design, Implementation, Supply and Production of

Grounding Systems Services

- soil resistivity surveys
- Design and perform Grounding system calculations at power frequency (50 Hz) and high frequency
- Design of SRG Grounding system for data center
- short circuit calculations and Sizing cables & busbars
- Design of Bonding Systems
- Design Grounding Systems in CDEGS and AutoCAD Software
- supply of products
- Performance, Testing and Commissioning
- interval auditing and ongoing assurance of compliance

Lightning Protection Services

1

Risk assessments for lightning exposure

2

Determining the protection level of the structure in order to select the type of lightning arrester

3

Design of passive and active lightning protection system

4

Provide drawings and design details using lightning protection system design software

5

Design of Grounding Systems for Lightning Protection

6

Design of Bonding System for Lightning Protection

7

Installation Lightning Protection System

8

Test and verification of lightning protection Systems

Surge Protection Services

- Design of Surge Protection for Electrical Network
- Design of Surge Protection for Control & IT System
- Design of Surge Protection for CCTV
- Design of Surge Protection for communication System
- Design of Surge Protection for Photovoltaic System
- Design Surge Protection in OBO and Dehn Software
- Provide surge arrester design documents and drawings of their placement
- Performance, Testing and Commissioning
